Date _____

Solving Two-Step Equations

Determine if the given value is a solution for the equation (You are only completing the "Check")

1) $2x + 3 = 7$, for $x = 5$

2) $3y - 2 = 7$, for $y = 3$

3) $2x + 3 = 16$, for $x = -2$

Solve and check the following Two-Step Equations

4) $2x + 7 = -1$

5) $5x - 2 = 8$

6) $3x + 4 = 19$

7) $\frac{x}{4} + 3 = -2$

8) $\frac{x}{3} + 4 = 1$

9) $\frac{2}{3}x - 5 = -9$
